Season

the same. The segments are Nov. 20-Dec. 5 and Dec. 18-Jan. 9, 2011.

Hunters may harvest one antlered buck per day until the statewide bag limit of three is reached, including those deer harvested during archery and muzzleloader seasons. An antlered buck is a buck with an antler at least three inches long.

For antlerless deer

hunting in Units A and B during this season, refer to the list of hunts on page 26 of the 2010 Tennessee Hunting and Trapping Guide. All hunts listed are now non-quota. Each county listed on page 26 has its own bag limit. A hunter may harvest the bag limit of antlerless deer in any open Unit A or B county and then go to any other counties listed and take the antlerless bag limit there,

also. The bag limit for antlerless deer in Unit L is three per day.

A Type 94 permit is required to harvest antlerless deer during this season on all non-quota hunts in Units A, B, & L, except for holders of an Annual Sportsman, Lifetime Sportsman, or Senior Citizen License Type 167 Permit.

TWRA personnel will be collecting data

at various check-in stations across the state on Saturday. Antlered bucks will be measured and aged for management purposes.

Anyone born on or after Jan. 1, 1969 is required to carry proof of satisfactory completion of a hunter education class or be in possession of the Apprentice Hunting License (along with

other required licenses) while hunting any species in Tennessee.

For more information about Tennessee's 2010-11 deer hunting seasons, refer to the 2010 Tennessee Hunting and Trapping Guide available at all license agents, TWRA regional offices in Jackson, Nashville, Crossville, and Morristown or on the TWRA website at www.tnwildlife.org.

PUBLIC NOTICE

The Lenoir City Utilities Board is continuing its efforts to improve the drinking water distribution system. However, due to the improvements there will be disruption in water service starting November 18, 2010, until November 24, 2010, in the Lenoir City Area. The disruptions are scheduled to occur from 8:30 am until 3:00 pm. These disruptions will allow the construction contractor to make the necessary connections from the old water system to the new water system. These improvements benefit you, the customer, by providing a more reliable water source and additional storage to be used for periods of high demand and firefighting.

When water service is re-established, iron deposits sometimes mix in the water resulting in a brown discoloration to the water in the area. This condition is only temporary and will normally correct itself in a number of hours after water service has been re-established. During this period of time, we recommend that you flow your cold water prior to use to determine if there is any discoloration. While the water is still safe for consumption, we recommend not washing any clothes, particularly white clothes, without first testing the water for discoloration. If your water is discolored, it will clear up on its own under normal usage over a period of time. It is also best to limit the use of your hot water until it's clear, as this will keep the iron deposits from entering into your hot water heater.

A drop in water pressure may also be noticeable during these times; however, the water pressure should return to normal within a short period of time.

If you have any questions, please contact LCUB @ (865) 986-6591.
